10. (New) A method for displaying information on a display, said information including elements, wherein an element is either of a continuous length presenting a length which is equal to or greater than the size of said display, or a wrapped length presenting a length which is less than the size of said display, and said display is further provided with a user interface including a menu structure of items, said method comprising the following steps:

providing in said menu structure a selectable continuous length item and a wrapped length item;

selecting said continuous length item or said wrapped length item in the menu structure of the user interface; and

displaying said information according to the selection made in the menu structure of the user interface, in order to allow a user to toggle between the continuous length and the wrapped length.

11. (New) A method according to claim 10, wherein said information is displayed as alpha-numerical signs.

12. (New) A method according to claim 10, wherein said element, having a continuous length, is scrolled over said display.

13. (New) A method according to claim 10, wherein the item of a wrapped length, is adapted to fit a size of the display, by splitting the element into parts, each part fitting in a size of the display and feeding said parts in a vertical direction over said display, each time a length of the element is greater than the width of the display.

14. (New) A terminal for displaying information on a display, the information comprising elements, wherein an element is either provided with a continuous length presenting a length which is equal to or greater than a size of said display, or a wrapped length presenting a length which is less than a size of said display, said terminal comprising:

a display for displaying said information; and

a user interface provided with a menu structure comprising a selectable continuous length item and a wrapped length item, said items are arranged to display said information according to a selection made in the menu structure, in order to allow a user to toggle between the continuous length and the wrapped length.

15. (New) A terminal according to claim 14, wherein said information is alpha-numerical.

16. (New) A terminal according to claim 14, wherein said element, having a continuous length, is arranged to be scrolled over said display.

17. (New) A terminal according to claim 14, wherein the element, having a wrapped length, is arranged to split the element into parts, each part fitting in the size of the display and to feed said parts in a vertical direction over said display, each time a length of the element is greater than a width of the display.

18. (New) A terminal for displaying information on a display, said information comprising elements, wherein an element is either provided with a continuous length presenting a length which is equal to or greater than a size of said display, or a wrapped length presenting a length which is less than the size of said display, said terminal comprising:

a display for displaying said information;

means for setting a first type of elements to be displayed as a continuous length item and a second type of element to be displayed as a wrapped length item;

means for identifying the first type of element when acting in a text to be displayed; and

means for displaying the first and second type of elements according to an identification thereof.

19. (New) A method according to claim 10 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

20. (New) A method according to claim 11 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

21. (New) A method according to claim 12 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

22. (New) A method according to claim 13 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

23. (New) A terminal according to claim 14 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

24. (New) A terminal according to claim 15 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

25. (New) A terminal according to claim 16 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

26. (New) A terminal according to claim 17 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.

27. (New) A terminal in accordance with claim 18 wherein:

the display displays the menu structure provided by the interface and a user selects from the display of the menu structure to have a display of said continuous length item or said wrapped length item by providing an input through the interface indicating the selection of the continuous length item or said wrapped length item.
